

OVJA 1.1 TTRB

Full 3-way jacquard – with full electronic control on both fabric faces. With stripes, transfer and welt.

Everything it takes to stay at the forefront of fashion: double jersey jacquard and structures, fast and universal, for both fabric faces – also with welt.

The OVJA 1.1 TTRB has the versatility it takes to keep a circular knitting machine abreast of the very latest fashions: 3-way jacquard and automatic stitch depth adjustment for the welt. Which opens up enormous patterning variety for both fabric faces. With fast setting afforded by electronic 3-way individual needle selection of the cylinder and dial needles. And the addition of stripes and transfer means truly unlimited scope in terms of fashion creativity – even for fully fashioned articles. The option of elastomer plating in definable areas can, for example, put more elasticity in a cuff.

Fast, easily produced pattern changes make even small batch sizes viable.

Certified: DIN EN ISO 9001

OVJA 1.1 TTRB

Creative patterning on both fabric faces, efficient production.

With tried and tested Mayer & Cie. fully electronic controls ensuring minimal resetting times, this machine opens up a whole new scope for creativity. The cylinder cam can be simply adjusted to the miss-knit – knit, miss-knit – tuck, tuck – knit positions, and the needles are selected electronically in line with the pattern. The dial cam also works with individual electronic needle selection. The result: A unique variety of patterns, simple resetting on the fabric reverse, efficient knitting – for even the smallest batch sizes.

Automatic stitch depth adjustment.

This means simpler operation, prevents manual setting errors and makes any order easily reproducible. Stitch depth adjustment is actuated automatically by the pattern control system.

Knitted welt included.

For fully fashioned articles, the OVJA 1.1 TTRB knits with separating thread and welt, enhancing productivity for individual part production by reducing waste and cutting down on making-up processes. Added to this is the option of elastomer plating in defined areas, for example in waistbands cuffs.

Patterning variety with stripes and transfer.

Fashion calls for individuality. The OVJA 1.1 TTRB offers all the right credentials for the latest fashions – today and tomorrow.

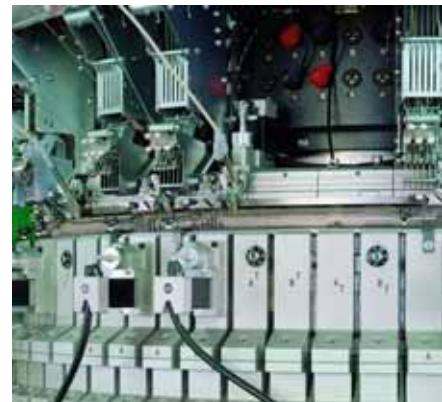

Positive needle guidance enhances jacquard quality.

Greater operating reliability and stitch precision as a result of positive needle guidance and cylinder needles with movable butt (patented MCT development!) – all down to smooth needle guidance and gentle deflection of the yarn. The elimination of double and dropped stitches means lower needle wear, improved productivity and greater economy.
